

Card holders are used almost every day. Exeter RFID smartphone card wallet - this name says it all! Practical and with your logo, the perfect advertising medium. This credit card holder is made of 50% Aluminium and 50% PP Plastic. The card holder is intended to be attached to the smartphone. Most cards have so-called RFID technology, in which a chip can transmit data "contactless", as is used in many places for payment. This card case protects against unauthorized access to the card by third parties. The holder can store up to 2 cards. You can get our promotional items at low prices anyway, but always remember: the more credit card cases you order, the cheaper the unit price will be.
